Object Store and Water marking:

>> object stores data persistent(permanent). cache stores data inmemory.

>> water marking is used, when we want to retrieve data depend on time interval.

Example: consider a product table has 5 records, we can save max product_id in object store, when we retrieve data, it will give 5 rows. after we add some rows, then remaining rows will be display because we store max product_id.

Scheduler: for every 5 seconds, it need to be triggered.

Retrieve: it has max product_id and default is 0.

Select : it will retrieve data from db
